EDUCATION

University of Michigan

Bachelor of Engineering in Data Science, Minor in Business

Ann Arbor, MI

December 2025

- Willie Hobbs Moore Achievement Award, MLK Student Spirit Award, Leadership Engagement Scholarship

WORK EXPERIENCE

Intel

AI Ambassador

Remote

Oct 2024 – Present

- Developed an AI party DJ that streamlines event music curation by implementing real-time video analysis, using pose estimation and Graph Neural Networks (GNN) to analyze crowd behavior and mood; system selects songs based on audience vibe to maintain optimal atmosphere.
- Improved AI performance in varied environments, reducing error rates by 2, by integrating multiple encoders to handle different lighting conditions and settings

ByteDance

Innovator Fellow

San Jose, CA

May 2024 – Present

- Developed and open-sourced a multimodal masking pipeline, created from the ground up to maintain essential video context for AI model fine-tuning, improving upon standard masking methods using advanced synthetic data generation and pseudonymization techniques.
- Advanced contextual attribute preservation through creating a synthetic data pipeline that combines video dense captioning, keypoint estimation, and GNN, boosting overall model accuracy.

Cerebras Systems

Fellow

Remote

Oct 2024 – Present

- Achieved an increase in data processing speed by my migrating project to Cerebras inference to develop an adaptable LLM-based agent architecture for multi-agent cooperation, outperforming traditional GPU systems.

Emerging Technologies Group

XR Developer and Lab Manager

Ann Arbor, MI

Oct 2022 – Present

- Collaborated with multiple academic departments to conceptualize, design, and launch three VR games and simulations in nuclear engineering, spatial reasoning, and anatomy, enhancing educational and research initiatives and increasing lab VR usage, workshops, and classes by 30
- Conducted comprehensive testing and maintenance of Unreal Engine-based VR applications, reducing bug incidence and ensuring seamless user experiences.

Genesis Global Trading

Sales and Trading Analyst

New York, NY

June 2022 – Aug 2022

- Built a machine learning model to identify optimal hedging strategies by integrating Imaki's no-transaction band network into Bühler's Deep Hedging framework, utilizing neural networks to address transaction costs and enhance risk management.

Nexamp

Design Engineer

Boston, MA

Jan 2021 – June 2021

- Increased proposal success rate by designing and optimizing solar farm layouts for client presentations, producing detailed conceptual designs and schematics for grid-tied photovoltaic and battery storage systems.

RESEARCH EXPERIENCE

University of Michigan, Strategic Reasoning Group

Research Assistant

Ann Arbor, MI

Sept 2022 – Aug 2023

- Transitioned a Java-based trading simulator to Python, improving simulation speed and scalability, which facilitated more comprehensive strategy analysis.
- Researched and built deep learning models to analyze the real-world effectiveness of deep hedging, providing critical insights for their application in dynamic market environments.

University of Michigan, ASSET Lab

Research Assistant

Ann Arbor, MI

Sept 2022 – Aug 2023

- Enhanced the understanding of emissions performance by analyzing large datasets and developing comparison models for diesel vs. solar-powered motorcycles, contributing to sustainable transportation research.
- Supported sustainable initiatives by co-authoring an academic paper detailing the emissions impacts of electrifying motorcycle taxis in Kampala, Uganda, advancing research in the field.

PROJECT EXPERIENCE

Multi-agent Cooperation Manager - Developed a highly **adaptable LLM-based agent architecture** that enables **effective cooperation** in diverse mixed-motive scenarios through promise-keeping, negotiation, and compromise strategies in order to maximize the individual returns while promoting social welfare among both familiar and unfamiliar agent populations. This project is part of The Concordia Contest hosted by Google DeepMind for the NeurIPS 2024 conference as well as the LLM Agents MOOC Hackathon hosted by UC Berkeley RDI

Financial Market Behavior Predictor - Developed a machine learning model that predicts financial market behavior using anonymized real-world trading data as part of Jane Street's Real-Time Market Data Forecasting competition. The model uses a **deep learning architecture**, applied **wavelet transforms** and adaptive normalization techniques to manage **non-stationary time series** and distributional shifts, implemented **Bayesian optimization** for **hyperparameter tuning**, and **PyTorch** and **RAPIDS** for **GPU-accelerated** training—maximizing the weighted R-squared score over an extended forecasting period.

COMPETITION AWARDS

MHacks 2024, Intel - 1st Place Best Use of Intel AI

HackMIT, Most Marvelous

Google x MHacks AI Hackathon, Fourth Place

HackHarvard 2023, First-time hack

PennApps XXIV, The Wolfram Award

buildspace, s3

LEADERSHIP EXPERIENCE

National Society of Black Engineers (NSBE)

University of Michigan Chapter

President, Finance Chair

- **President** - Oversaw the professional development of over 120 engineers and led 9 executive board members, ensuring the collective goals of the board were achieved. Resulted in our chapter being selected as the best in the region.
- **Finance Chair** - Established 21 strategic partnerships with Fortune 500 companies, generating over 36,000 in sponsorship funding.

B3

Student Outreach Program

President, Co-founder

- Coordinated campus-wide career programs, bringing over 40 local high school students from underrepresented communities to the university to learn about academic majors and resources.

optiMize

Community Incubator

Core Team Member

- Co-organized the annual Social Innovation Challenge, managing logistics for over 200 participating teams and coordinating with 50+ mentors and judges. Led a diversity recruitment initiative that significantly increased participation from underrepresented groups.

TECHNICAL SKILLS

C++, Python (Pandas, NumPy, SciPy), PostgreSQL, Docker, AWS, Flask, Pytorch, OpenCV, FFmpeg, MediaPipe Data Structures, Algorithms, Open-source, Machine Learning, Multimodal LLMs, Fine-tuning Models, Transformers
